

daily birth ball exercises

These gentle movements help your pelvis stay mobile, create space for your baby, and support optimal positioning, think of them as small daily actions that can make a big difference in pregnancy and labour.

extras:

- FIRE HYDRANT (x10 BOTH SIDES)
- SIDE STEP UP AND DOWN STAIRS (USE BANNISTER)
- CURB WALKING
- OUTWARD LEG TOE TAPS
- DEEP SUPPORTED SQUAT

- HIP CIRCLES (BOTH DIRECTIONS)
- U SHAPES (BOTH DIRECTIONS)
- SIDE TO SIDE
- PELVIC TILTS (TAILBONE TO PUBIC BONE)
- KNEE DROPS (15 BOTH SIDES)
- LEG LIFTS (SLIGHTLY LIFT LEG OFF THE GROUND)
- LUNGES (OVER BALL & LUNGE FORWARD + BACK)

daily birth ball exercises plan

1. Birth Ball Flow (2-3 minutes)

Sit comfortably on a birth ball.

- Hip circles (both directions) × 5-10 each way
- U-shapes × 5 each direction
- Pelvic tilts (tailbone to pubic bone) × 10

✨ Why it helps:

Keeps the pelvis mobile, eases back pain, and encourages optimal baby positioning.

2. Gentle Asymmetry (2-3 minutes)

Choose 2-3 of the following:

- Side to side sways × 30-60 seconds
- Knee drops × 10-15 each side
- Outward leg toe taps × 10 each side

✨ Why it helps:

Asymmetrical movements create space in the pelvis and support baby's rotation.

3. Strength + Opening (2-3 minutes)

Choose 1-2 movements:

- Fire hydrant × 10 each side
- Leg lifts × 8-10 each side
- Supported squat × 3-5 slow breaths
- Lunges (step up or over the ball) × 5 each side

✨ Why it helps:

Builds strength in hips and legs while opening the pelvis for birth.

4. Everyday Movement (1-2 minutes or during your day)

Add one of these into daily life:

- Side-step up stairs using the bannister
- Curb walking for a short distance
- Gentle walking with relaxed hips

✨ Why it helps:

Your daily habits can actively support your baby's position.

daily pregnancy yoga routine

Props: Yoga mat, optional yoga block or pillow, chair for support.

1. Centering & Breath (1–2 min)

- Sit cross legged or wide legged
- Place hands on your belly.
- Inhale deeply through the nose, feeling your ribs expand.
- Exhale slowly, feeling your belly soften.
- Focus: Encourages diaphragmatic breathing which improves fetal positioning and relaxes the pelvic floor.

2. Cat/Cow (1–2 min)

- Come onto all fours, wrists under shoulders, knees under hips.
- Inhale (Cow): Drop belly, lift chest, tailbone up.
- Exhale (Cat): Round spine, tuck chin, draw navel toward spine.
- Repeat 5–8 times.
- Focus: Mobilizes spine, eases lower back tension, encourages optimal fetal positioning.

3. Pelvic Tilts/Rocking (1–2 min)

- Stay on all fours.
- Rock pelvis forward and back slowly.
- Optional: small circles with hips clockwise, then counterclockwise.
- Focus: Strengthens lower back, opens hips, helps baby settle into optimal position.

4. Butterfly (2–3 min)

- Sit tall, soles of feet together, knees drop to the sides.
- Hold feet with hands, gently press knees toward the floor if comfortable.
- Rock knees gently like butterfly wings.
- Focus: Opens hips, encourages optimal fetal positioning, stretches inner thighs.

5. Seated Side Stretch (1 min per side)

- Sit tall, legs crossed or on chair.
- Inhale, raise right arm overhead.
- Exhale, gently lean left.
- Hold 3–5 breaths per side.
- Focus: Lengthens side body, opens ribcage for better breathing. and increase space for baby

6. Final Relaxation / Belly Breathing (2 min)

- Sit or lie on left side with pillow support.
- Rest hands on belly.
- Inhale deeply, exhale slowly.
- Optional: visualize your baby settling comfortably into the pelvis.
- Focus: Calms nervous system, promotes fetal comfort and circulation
